Waste disposal concept “Ferienhaus Fern-Sinnesnah”

Dear tenants,

Things are different on the mountain. Among other things, the waste material is **only collected once a month** by the local waste disposal company. The garbage is not collected in closed bins, but the materials to be disposed of are collected in the bags provided. The garbage must therefore be **separated in these sacks** according to the instructions of the disposal company.

In the attachment you will find a detailed list of what recyclable material is to be disposed of.

Basically:

- In the storage room you will find the necessary garbage bags from the local disposal company for residual waste, recyclable materials made of PVC (yellow dot) and paper waste. It is important to ensure that waste is separated consistently. Hazardous waste does not belong in the garbage bags.
- The household garbage is to be disposed of in the foil or paper bags of the waste disposal company. The **closed** bags are stored behind the house in the garbage cans provided. Unfortunately, these garbage cans are not emptied directly, but only serve as temporary storage for the garbage bags until collection.
- The bags **for paper** can also be deposited in the iron bin behind the house.
- **Only Uncooked vegetables, fruit, coffee filters and tea bags** should be disposed of in the compost heap. The three-part waste bin with a bucket for compost waste is located under the sink. The green garbage bag can be disposed of with the compost on the compost heap. The composter stands behind the garage on the slope between the evergreen trees.
- The **ashes of the fireplace** can also be disposed of directly in the compost heap.
- **Leftovers, bones or other food must not be disposed of in the compost due to the lovely small rodents and must therefore be disposed of as residual waste.**
